231/2 – Biology Paper 2
Monday 8:00 am – 10.00 am
19/11/2012 (1st Session)

Instructions to candidates

(a) Write your name and index number in the spaces provided above
(b) Sign and write the date of examination in the spaces provided above
(c) This paper consists of two sections; A and B
(d) Answer all the questions in section A in the spaces provided
(e) In section B answer question 6 (compulsory) and either question 7 or 8 in the
spaces provided after question 8.
(f) This paper consists of 12 printed pages
(g) Candidates should check the question paper to ascertain that all the pages are
printed as indicated and that no questions are missing.

For Examiner’s Use only

1. In a certain plant species which is normally green, a recessive gene for colour (n) causes the plants to be white in colour. Such plants die at an early age. In the heterozygous state, the plants are pale green in colour but grow to maturity.

(a) Give a reason for the early death of the plants with the homozygous recessive gene. (2 marks)

(b) If a normal green plant was crossed with the pale green plant, what would be the genotype of the first filial generation (F₁ generation)? Show your working. (4 marks)

(c) If heterozygous plants were self-pollinated and the resulting seeds planted, work out the proportion of their offspring that would grow to maturity. (2 marks)
2. The diagram below illustrates the structure of the kidney nephron.

(a) Name the part labeled E. (1 mark)

(b) How is the part labeled F adapted to its function? (4 marks)

(c) State three physiological mechanisms of controlling the human body temperature during a cold day. (3 marks)
3 (a) In an investigation, equal amounts of water was placed in three test tubes labeled G, H, and J. Pondweeds of equal length were dropped in each test tube. The test tubes were then placed identical conditions of light and carbon (IV) oxide at different temperatures for five minutes. After five minutes, the bubbles produced in each test tube were counted for one minute. The results were as shown in the table below.

<table>

</tr>
</tbody>
</table>

(i) Name one requirement for this process that is not mentioned in the investigation. (1 mark)

(ii) Name the gas produced in this investigation. (1 mark)

(iii) Account for the results in test tubes H and J. (2 marks)
4. The diagram below illustrates the arrangement of bones and muscles in the human arm.

(i) Name the bones labeled K and L  
K ……………………………………………………………………..
L ……………………………………………………………………

(ii) Explain how the upward movement of the lower arms is brought about by the bones and muscles shown in the diagram above.

<td>34000</td>
</tr>
</tbody>
</table>

(a) (i) Using the same axes, draw graphs of the relative populations of P and Q against time. (7 marks)
(ii) With a reason, identify the curve that represents the prey. (2 marks)

(iii) Account for the two populations between 25 and 32 years. (2 marks)

(iv) Which years were the two populations equal? (2 marks)

(v) Apart from predation, state three biotic factors that may have led to the decline of the prey population. (3 marks)
(b) Describe the hazards of air pollution by Sulphur (IV) Oxide. (4 marks)

7. Using a relevant example in each case, describe simple and conditional reflex actions. (20 marks)

8 (a) Using a relevant example, describe how an allergic reaction occurs in a human being. (10 marks)

(b) Describe how environmental factors increase the rate of transpiration in terrestrial plants. (10 marks)
